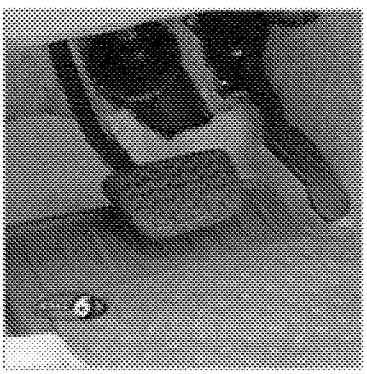
NHTSA explains Sevierville woman's sudden acceleration in Lexus

August 29, 2007

By DON DARE
6 On Your Side Reporter

"I think it's sad that these mats were installed like they were," Rhonda Smith says, reading the report from NHTSA.



Toyota is warning customers never to drive with the all weather floor mat (seen here) on top of the carpeted floor mat.

SEVIERVILLE (WATE) -- In May, 6 On Your Side first reported that a federal safety group was investigating why a Sevierville woman couldn't stop her new car when it began accelerating on Interstate 40. Now, there are new details.

The National Highway Traffic Safety Administration (NHTSA) is explaining what may have caused the unwanted acceleration.

(To do an online search of NHTSA reports, click here and put in the vehicle's year, make and model. Then you can select "vehicle speed control" to see the complaints.)

In its report, NHTSA suggests what may have lead to the unexpected sudden acceleration of 14 2007 Lexus ES350s it began investigating early this spring. One of the cars belonged to Rhonda Smith, of Sevierville.

In a letter sent in August to Rhonda, the Lexus division cautions that the all weather winter floor mat should not be put on top of the carpeted floor mat in the driver's seat position of the ES350.

Rhonda bought that model in 2006. "I think it's sad that these mats were installed like they were."

The floor mats in Rhonda's car, as she showed 6 On Your Side previously, were one of several concerns that came up in the investigation by the NHTSA.

On October 12, 2006, Rhonda drove her Lexus onto 1-40 Westbound from the Sevierville on ramp and started to merge. "I had sped up to about 65 miles an hour."

Then Rhonda said something strange happened. The car began accelerating on its own. "I looked down at my speedometer. It had gotten up to about 70 and I didn't have my foot on the accelerator."

"At about 75, the cruise light came on by itself. So I thought, maybe that's why it started to speed up. So, I took my hand and disengaged the cruise," Rhonda said.

But she said the car kept on going faster. "And then I geared down into neutral and it did nothing. So I kept doing that. Then I just put it in reverse. "

Rhonda said she also applied the brakes. "Then, of course, I pushed the emergency brake on. I guess I said out loud, I can't believe this is happening."

Eventually, the car stopped after traveling about six miles. The NHTSA investigation focused on the unsecured, all weather floor mat.

This past spring, Rhonda told 6 On Your Side the dealer had put the winter mat on top of her carpeted floor mat. But it could have slid accidentally onto the pedal since it wasn't secured by a plastic hook.

Investigators asked whether she had pushed the engine control button. Rhonda's car does not have an ignition key.

To the best of her recollection, Rhonda did not press the button as long as required to stop the engine.

NHTSA engineers also checked the brakes on her car. Rhonda said she applied the brakes but the car didn't stop. Yet, it had only 2,700 miles on the odometer.

Rhonda says she's read details of the preliminary investigation. The report says sometimes, repeated applications of the brake pedal reduced acceleration but did not stop the vehicle.

It appears the drivers were unaware that the engine control button's function changes. When the vehicle is in motion, it must be depressed for three seconds.

The report also says, "An unsecured Lexus all weather floor mat can trap the throttle pedal in an open position, resulting in significant unwanted acceleration."

This past spring when 6 On Your Side looked closely at the winter floor mat, there was a warning. But it's hard to read. In tiny print it says, "do not place on top of existing floor mats."

Toyota mailed Rhonda a sticker to be placed on the winter floor mat. It warns to never use more than one mat at a time in the driver's seat position.

The government's preliminary evaluation of the Lexus ES350 is finished. However, there have been additional consumer complaints like Rhonda's to NHTSA.

NHTSA has decided to upgrade its probe to what's called an engineering analysis. That means it will test some Lexus ES350s itself to determine whether there's a safety issue involved.

NHTSA says Toyota Motor Company believes the all weather mat is not a safety related defect. Unsecured mats were found in the majority of the vehicles investigated.

Lexus tells 6 On Your Side it's cooperating fully with NHTSA as it investigates the various allegations in the report.

Subject BuzzUpdate: Detroit Free Press States Toyota Denies Tacoma Unexpected Acceleration

Hello,

As an update to yesterday's BuzzAlert (shown below) regarding the Detroit Free Press article on Tacoma unexpected acceleration, please note the automotive enthusiast blogosphere has begun to take note, and the story can now be found on several additional consumer discussion venues. Discussion continues to be generally negative, though several enthusiasts discuss reports of unexpected acceleration in other makes/models, noting that driver error has almost always been the cause.

http://www.autoblog.com/2008/06/10/toyota-under-spotlight-for-possible-tacoma-sudden-acceleration/
http://www.thetruthaboutcars.com/toyota-dismisses-unintended-acceleration-claims/

Subject: BuzzAlert: Detroit Free Press States Toyota Denies Tacoma Unexpected Acceleration

Hello all,

Online Buzz Summary
On June 10, 2008, the Detroit Free Press is reporting that Toyota has claimed the 431 customer complaints associated with the current generation Toyota Tacoma and unexpected acceleration are a result of media publicity, and that the vehicle is not defective. The article also claims that federal regulators are debating whether to "upgrade" the investigation that launched in February of this year, which has now expanded to include over 775,000 Tacomas sold between the 2004 and 2008 model years.

Online consumer reaction at this very early point is minimal to moderate in volume, but this may change if the Detroit Free Press article is picked up by influential automotive enthusiast blogs such as Autoblog.com or Jalopnik.com, or more general consumer research sites such as Edmunds.com or Consumerist.com. Sentiment is generally negative towards Toyota and Toyota quality, with some stating that Toyota quality has fallen or is overrated. Still, some speak in defense of the brand with a few noting that Audi faced a similar media problem in the 1980s, in which there was no defect in its vehicles but the brand's sales and image suffered because of consumer perceptions of unintended acceleration. On MotorTrend.com, there are a few references to the recent Toyota Tacoma Frame Rust issue as evidence that Toyota supports its customers and will act appropriately if there is a problem uncovered by the NHTSA. Some discussion on the Detroit Free Press website, Freep.com, is off-topic and discusses the import vs. domestic argument along with UAW concerns.

Where is the conversation?
http://www.freep.com/apps/pbcs.dll/article?AID=/20080610/BUSINESS01/806100389
http://forums.motortrend.com/70/6816837/the-general-forum/toyota-denies-tacoma-is-defective/index.html

What exactly are online consumers and saying?
Negative towards Toyota, Toyota Quality
"If this were a Ford or GM, it would be on the 6:00 news, and 20/20 would do a full investigation of the sudden acceleration claims. I truly hope that no one is hurt or killed by one of these faulty trucks."
Freep.com, June 10, 2008

"It's cheeper to pay some of owerns then fix the problem. You know like Ford did with the pinto. So is toyoa's on its down fall"
Freep.com, June 10, 2008

"All I can say is that I worked at an auto auction and witnessed two issues like this. They are truly horrifying to see. Toyota should be adopting a "better safe than sorry" policy with this, not making excuses and placing the blame on other people. I'm not saying foreign cars are inferior, but they are not immune to problems, either. When questioned on the recently larger number of recalls, Toyota said it is because they are selling more vehicles. Toyota needs to realize that they should focus on safety and sales equally. I don't care how many vehicles you sell. If they're not safe, then your company's not worth a dime."
Freep.com, June 10, 2008

"Toyota is taking it's usual stance on defects, deny, deny, deny and blame the customer."
Freep.com, June 10, 2008

"I have said this many times over and over again, Toyota is one of the most overrated auto companies. They are becoming a larger company and the larger you become the more problems you are going to experience. Come on people; you would bash an American car company for denying these claims and placing blame on the customer but you won't do the same for your beloved Toyota? "Ooooh no!!! Toyota is having problems; the world is going to end!! It can't be true!!"
Get a grip people; no car company is perfect and certainly not Toyota. I am not an American Auto apologist either;

they have their problems that they are still obviously working on (heck, I am a Euro car fan that is starting to warm up to American autos). However, we need to give equal criticism and accountability."
Freep.com, June 10, 2008

"This is typical of reporting news about Toyota. If this was GM, Ford or Chrysler, this article would be on the front page. Yet, Toyota, with it's unwarranted teflon reputation, this gets buried. This is not a driver error or misunderstanding. [redacted] in the article explains it best.
[redacted] said he had to dodge a couple of vehicles as the truck's engine revved, despite having his foot on the brake, and that he was able to stop only by putting the truck in neutral gear, where the engine revved to the limit. The truck hasn't surged since, a dealer found nothing wrong, and [redacted] said he's taking Toyota to arbitration.
"I think about it constantly," said [redacted] who added that he had not heard of acceleration complaints with the Tacoma before his incident. "I don't use the cruise control, and I've got my hand on the shift knob all the time."
Freep.com, June 10, 2008

"If I were Toyota, having that many people say there is a problem should put some kind of research into action. But then again are they really interested in fixing it?
"If you can't laugh then you might as well stop living. It is the only medicine that cannot be patented or taxed by the government. Plus you can't get arrested for distributing it."
MotorTrend.com, June 10, 2008

"Toyota has a problem about announcing recalls, they just shrug off the problem until it gets to big to control"
MotorTrend.com, June 10, 2008

"Its wrong to ignore those poor 431 cutomers. Its also wrong blaming it on media, if Toyota has faith in its product, it should allow NHTSA to investigate."
MotorTrend.com, June 10, 2008

"toyota is not even close to top quality on recalls and customer service. Even if there is a problem they won't fix it. When there was a problem with the camrys transmission they knew about but refused to do any thing about. This very same problem happened with the prius and lexus es and toyota once again did nothing. So who cares about there reputation. So they were good in the past this however is the present and toyota is nowhere near good now."
MotorTrend.com, June 10, 2008

In defense of Toyota, References to Audi Unexpected acceleration, Tacoma Frame Rust
"To have any meaning we'd have to know how common reports of increased engine speed are in other makes and models of vehicles. I know some makes have had problems. Audi comes to mind.
Isn't this obvious enough the reporter and helpers should have done some research? Or is no such research needed for a newspaper biased against foreign owned companies? I suspect the latter and don't trust you to report without bias since the Freep still lists US assembled Hondas under imports in the want ads but US owned cars as domestic even if assembled outside the US. The policy is petty and dishonest."
Freep.com, June 10, 2008

"In the Audi case, it was pretty clear that the sudden acceleration was from DRIVER ERROR.
None the less, they put the pedals a little father apart and put some type of lock on the auto transmission."
Freep.com, June 10, 2008

"I find that Toyota is top quality on recalls and customer service. But if there is a problem, they need to solve it. I am sure they will. Their reputation for customer service is the best. They do not want to create a problem that ends up in court. And luckily for us, our legal system provides for a method of fixing things if a customer is not being taken care of. If Toyota becomes 'difficult' i am sure the legions of lawyers out there will help convince them that they need to start paying attention."
MotorTrend.com, June 10, 2008

"Um on this one, I am waiting for the NHTSA verdict. Stuff like this nearly killed Audi because of people not knowing how to drive. And yes, that time it was the drivers fault. Could be the case here."
MotorTrend.com, June 10, 2008

"If there is a defect, then Toyota will certainly handle it well. Heck, they've just bought some trucks at 150% of there value, something no other automaker has done.
Then again, Toyo has the money to take care of these issues too.
So out of 775K vehicles, .05% noticed sudden acceleration, and even less than that (51) had an accident where they claim teh truck simply accelerated on their own until they bashed into something?

Sounds like some people don't want to admit fault in their own accidents.
Either way, if there's a defect, they'll handle it no doubt."

4 killed in apparent runaway car crash

(AP) -- Aug 31, 2009

SANTEE, Calif. — Four people died after a speeding runaway car crashed into an SUV, a fence and an embankment before rolling several times, landing on a dry patch in the San Diego River and bursting into flames.

California highway Patrol officer Brian Pennings says victims of Friday's crash included Mark Saylor, 45, a 19-year CHP veteran; his wife Cleofe, 45; their 13-year-old daughter and Saylor's brother-in-law,

Pennings said someone, believed to be Saylor's wife, called 911 just before the crash to say the accelerator was stuck. The car was headed downhill, and a witness said it was going more than 100 mph.

The SUV driver was hospitalized with moderate injuries.

Saylor was a safety officer, whose job was to inspect school buses, ambulances, tow trucks and armored vehicles.

Toyota Speed-Up Suits Say Problem Goes Deeper Than the Pedal
2010-01-28 20:05:30.353 GMT

By Thom Weidlich and Margaret Cronin Fisk
Jan. 28 (Bloomberg) -- Toyota Motor Corp., which last week recalled 2.3 million vehicles in the U.S. to fix sticking gas pedals, faces lawsuits that link so-called sudden acceleration to other causes.
At least three class-action, or group, lawsuits filed in November and one last week against Toyota, the worldâ€™s largest carmaker, blame the sudden acceleration on the carsâ€™ electronic throttle-control system, known as the ETCS-Intelligent System.
â€œVehicles equipped with ETCS-I have a dangerous propensity to suddenly accelerate without driver input and against the intentions of the driver,â€□ Toyota customers said in a complaint filed in federal court in Charleston, West Virginia.
Toyotaâ€™s Jan. 26 decision to stop U.S. production and sales of eight models to fix defective accelerator pedals may cost the company as much as 100 billion yen ($1.1 billion) in operating profit a month, according to Koji Endo, managing director of Advanced Research Japan in Tokyo. The recall, announced Jan. 21, covers the same eight models, including Toyotaâ€™s top-selling Camry and Corolla cars.
The carmaker, based in Toyota City, Japan, said on Jan. 27 itâ€™s also adding 1.09 million U.S. cars to a November recall of a record 4.26 million vehicles because floor mats could jam the pedals. A class action filed on Jan. 4 in federal court in Miami cites the floor mats as the cause of the sudden acceleration.
John Hanson, a spokesman for Toyota, didnâ€™t immediately return a call for comment on the litigation.

â€˜Blamed the Driverâ€™

Plaintiffsâ€™ lawyers claim that Toyota knew of the sudden acceleration problem for years before the November recall.
â€œFirst they blamed it on the driver, then it was the floor mats, then the accelerator pedal, and now theyâ€™re shutting down the plants,â€□ Edgar Heiskell, one of the attorneys in the West Virginia case, said in a phone interview today. â€œToyotaâ€™s position has changed at least three times.â€□
Other class actions may follow, Heiskell said.
Los Angeles residents [redacted] and [redacted] who claim they experienced multiple instances of unintended acceleration, filed a class action in federal court in Los Angeles on Nov. 5, seeking to represent all U.S. owners of certain Toyota and Lexus models.
[redacted] a resident of Los Angeles County in California, once pulled his 2008 Toyota Tundra pickup truck into a service station â€œwith his foot solely on the brake pedal when

his vehicle suddenly accelerated,â€□ according to a complaint he filed Jan. 22 against the company.

Put in Park

The vehicle continued to try to accelerate even after [redacted] slammed on the brakes and it lurched to a stop, according to the lawsuit in federal court in Santa Ana, California. The acceleration attempts stopped after [redacted] put the Tundra into park, he said. His lawsuit also cites the electronic throttle-control system.
The law firm representing [redacted] Kirtland & Packard LLP of El Segundo, California, filed a similar lawsuit against Toyota in November.
Reports of unintended accelerations of Toyota cars â€œbegan to increase significantly in 2002, when Toyota began installing the ETCS-I in a broad range of its vehicle lines,â€□ according to the West Virginia complaint. The electronic system â€œhas no mechanical linkage between the accelerator pedal and the throttle plate in the engine,â€□ lawyers wrote in the complaint.
Toyota faces at least five lawsuits brought by individual plaintiffs claiming deaths or injuries caused by sudden acceleration. In a Michigan lawsuit filed in August, the family of [redacted] claims she was killed when her 2005 Toyota Camry sped out of control on a residential street in April 2008.

80 Miles an Hour

That lawsuit also claims a defect in the electronic throttle control, said Heiskell, the lawyer for [redacted] family. The vehicle didnâ€™t have a floor mat, he said.
â€œShe blew past an intersection, witnesses saw her with both hands on the wheel,â€□ Heiskell said. â€œShe appeared to be standing on the brake while steering.â€□
[redacted] 76, was killed instantly when the Camry hit a tree at a speed of almost 80 miles an hour, he said.
A sudden-acceleration lawsuit spurred by an accident in Oklahoma also involved a 2005 Camry, attorney R. Graham Esdale Jr. said in a phone interview today. [redacted] then 76, pulled off a highway as her car sped out of control, he said.
â€œShe engaged the emergency brake, which kept the crash from being worse than it was,â€□ [redacted] said. [redacted] was injured and her friend, [redacted] 70, was killed in the September 2007 accident. [redacted] family sued Toyota in state court in Oklahoma City in September 2008.

â€˜Three Times Higherâ€™

Sudden-acceleration rates on the 2005 Camry are â€œthree times higher than those in the recalled vehicles,â€□ [redacted] said.
â€œThatâ€™s one of the things weâ€™re very concerned about. Toyota has ignored our class of vehicles.â€□
[redacted] said heâ€™s looking at three additional accident claims for possible lawsuits.
The Toyota customers in the class actions seek damages from the company for selling the allegedly faulty cars.
The class actions are [redacted] v. Toyota Motor Manufacturing West Virginia Inc., 09-cv-1247, U.S. District Court, Southern District of West Virginia (Charleston); [redacted] v. Toyota Motor Sales USA Inc., 10-cv-105, U.S. District Court, Central District of California (Santa Ana); [redacted] v. Toyota Motor Corp., 09-cv-8143, [redacted] v. Toyota Motor Sales USA Inc., 09-cv-8478, U.S.

District Court, Central District of California (Los Angeles);
and [redacted] v. Toyota Motor Sales USA Inc., 10-cv-20006, U.S.
District Court, Southern District of Florida (Miami).

Subject: Recently Purchased Vechicle-Now Recalled and Temporarily Suspended for Sale [Incident: 100128-000468]

Dear Toyota Corporation-
Â
I am a very concernedÂ customer with the most recent recalls.
Â
I purchased a 2009 RAV4 from Marc Jacobson Toyota in Durham, NC in Dec. 2009 and now the car has been recalled and Toyota has temporarily suspended the sell of the vehicle. I would like to know
Â
I have 2 small children and now I don't want to ride in the car and my husband does not want our children to ride in the car. This is causing a major problem for me as I am sure it is causing for millions o
Â
It is my hopes that Toyota is also working on implementing a plan for the customers that wonâ€™t be satisfied with the patch work.Â If there areÂ more fatalities or accidents due to this problem, that wil
thought to be a safe vehicle but now thatÂ does notÂ seem to be the case. My concerns may seem minor to you but when I have a car that I just purchased, will be paying for it for the next 6 years and I
Â
I would greatly appreciate a response. I know you're receiving a lot of inquiries, but I hope you take the time to address my concerns. They are safety related and should be a priority. Looking forward to
Â
I am sending this email so manyÂ Toyota corporate employeesÂ inÂ hopes someone will be compassionate enough to take the time to respond and address my concerns.
Â
Sincerely,
[redacted] (a not so satisfied customer right now).

Durham, NC [redacted]

Subject:BuzzAlert: 2007 Tacoma owner questions vehicle electronics/engine revving.

Hello,

On February 12, 2010, the owner of a 2007 Tacomaquestions the electronics in the vehicle after having observed out-of-the-ordinary engine revving when using a laptop near the vehicle. The owner reports that after the episode, the vehicle now suffers from a backfiring issue. The owner is responding to a post on TacomaWorld.com from late January 2010 in which the owner of a 2008 Tacoma V6 4x4 V6 6MT recounted experience with unintended acceleration.

Original Post:
"I think it is a connectivity/computer issue.

My 07 Taco has the devil in it from the get go.

The strangest thing I have had happen was I was at idle and outside of the truck using a laptop on the hood.Suddenly the truck revved wildlly redlining the engine for about 30 seconds until I shut the engine off. After I started it again it backfired loudly.Now it often backfires on cold start.Don't tell me this is not electronics Toyotaif full of Bull***T!"
TacomaWorld.com, February 12, 2010, author: cormudgen

Direct Link to TacomaWorld.com: http://www.tacomaworld.com/forum/technical-chat/72048-accelerator-issue-manual-tranny.html

Please note this alert has been sent to both QA Powertrain and QA Chassis teams.

Regards,
Joe
