

June, 2003

Dear General Motors Customer:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act.

Reason For This Recall: General Motors has decided that a defect, which relates to motor vehicle safety, exists in certain 2003 model year Chevrolet Express and GMC Savana vehicles. During a vehicle crash of sufficient severity to deploy the safety belt pretensioner, the front safety belt buckles in some of these vehicles may not release after the vehicle crash, or alternately may eject the front safety belt latches during the vehicle crash, resulting in increased risk of personal injury.

What Will Be Done: Your GM dealer will replace the front driver and passenger side safety belt buckles. This service will be performed for you at no charge.

How Long Will The Repair Take? The length of time required to perform this service correction is approximately 45 minutes. Additional time may be required to schedule and process your vehicle. If your dealer has a large number of vehicles awaiting service, this additional time may be significant. Please ask your dealer if you wish to know how much additional time will be needed to schedule, process and repair your vehicle.
