WHY IS IT BEING RECALLED:

The non-compliance with S6.10.2.3 of the FMVSS 403 is the result of the Anti Stow Interlock System not detecting the presence of a 50lb test weight on the platform operating volume. In the event this condition occurs during passenger operations it may be possible for the lift platform to begin stowing while a wheelchair or mobility aid user is still occupying the area of the platform close to the pivot point on the platform. This situation could cause personal injury.
