This letter is regards to amend our initial noncompliance information report dated, May 17, 2007. Upon further review we have discovered that there are only 848 pcs rather than 13,354 pcs of potential number of unites affected. Based on our further internal testing and analysis, we've determined the subject lamps produced after Nov. 1, 2006 could potentially have been non-conforming. The last photometric testing was done on Nov. 1, 2006 and Dec. 27, 2006. The result was passed the SAE/DOT regulation. After that, there were 7 lots been produced, total 848 pcs.

Product Development
Harry Han,

Best regards,

Maxzone Auto Parts Corp.
