**RE:** Airbag Recall Service Bulletin Posting Error

American Honda recently indicated that the expanded driver's airbag campaign was expected to launch on Friday, June 5, 2015. Due to unexpected systems-related delays, the launch of the campaign and related VIN inquiry population has been pushed to Tuesday, June 9, 2015.

This morning several driver inflator campaign bulletins directed dealers to two new inflator campaign bulletins. Unfortunately the iN VIN status inquiry was not functional for the new campaigns.

We are working to restore the original bulletins to SIS until the iN VIN status inquiry for the new campaigns is updated.

Continue to use the following bulletins:

- A08-093 *Safety Recall: Driver's Airbag Inflator Can Be Over-Pressurized*
- A10-039 *Safety Recall: Replacement Driver's Airbag Inflator Can Be Over-Pressurized*
- A14-045 *Recall: Driver's Airbag Inflator May Produce Excessive Pressure After Long-Term Exposure to High Absolute Humidity*
- A15-022 *Recall: Driver's Airbag Inflator May Produce Excessive Pressure After Long-Term Exposure to High Absolute Humidity*
